My self Muniprasad,

I have 3.5 years of experience as data scientist, currently i am working in ALML LABS Private Limited in Bangalore data scientist.
 i have good knowledge in various Supervised and Unsupervised machine learning models like Regression, Clustering, and Classification.i have good hands-on exprience from data collection to model deployment in machine learning projects.

 in classification models like logistic regression, decision trees and random forest.
 regression models like naive Bayes, linearregression, gK-nearest neighbors (KNN).
 clustering models like k-means clustering and Principal Component Analysis.

coming to my programming language, I am using Python, and databases are SQL, Oracle SQL, and MySQL.

I also work with popular libraries and frameworks like Pandas, NumPy, Scikit-Learn, NLTK, Matplotlib, Seaborn, Keras, and TensorFlow. These tools help me build machine learning models, analyze data, and visualize results.

 I have a strong understanding of machine learning, NLP, gen AI chatbot and data science concepts, which I apply to various projects.
